Free Examination Study Guide

A practical guide for students preparing for school examinations and other assessments.

1. Start With a Simple Study Plan

List the subjects and topics you need to cover. Divide your available time into short study sessions and set a clear goal for each session. Start with topics you find difficult, while revisiting easier topics regularly.

2. Use Active Recall

After studying a topic, close your book and explain what you remember. Write down key definitions, formulas, processes and examples from memory. Checking your notes afterwards helps you identify gaps.

3. Practise With Questions

Answer practice questions without looking at the solution first. When you make a mistake, identify why you made it and try a similar question again. Practising under timed conditions can also improve speed and confidence.

4. Make Short Revision Notes

Keep notes brief: key ideas, important terms, formulas, diagrams and examples. Use headings and bullet points so you can review a topic quickly before an examination.

5. Manage Your Examination Time

Read instructions carefully. Look through the paper before starting when permitted. Begin with questions you understand, keep an eye on the time, and leave a few minutes at the end to check your answers.

6. Take Care of Yourself

Get adequate sleep, eat normally, drink water and take short breaks during long study sessions. A rested mind is better prepared for learning and problem solving.

Quick Revision Checklist

Task	Done?
I have reviewed the topics for each subject.	
I have practised questions from difficult topics.	
I can explain the main ideas without looking at my notes.	
I have reviewed mistakes from previous practice.	
I have prepared the materials I need for examination day.	

Best Brain Tuition encourages consistent study, honest practice and confidence. Good luck with your examinations!
